

FALL PROTECTION REMEDIATION SOLUTIONS

Protect Your Employees From Slips, Trips, and Falls

At Safety Solutions and Supply, we understand the importance of fall protection in the workplace. Our comprehensive fall protection remediation solutions, including inspection services, equipment sales and rentals, and employee training courses, are designed to keep your workers safe and your workplace compliant with OSHA standards. We offer a range of training courses, from 4-hour general application classes to 24-hour compliance courses, as well as a wide variety of fall protection equipment available for purchase or rental.

Inspection Services

Our team of fall protection specialists is equipped with the expertise and experience necessary to inspect fall protection equipment of any make or manufacturer. Our inspection process involves an extensive analysis of your fall protection system, including equipment such as harnesses, lanyards, lifelines, and anchors. We check for any signs of damage or wear and tear that could compromise the integrity of the system and any defects or non-compliance issues.

In addition to our physical inspection, we thoroughly review your fall protection program to ensure that it meets all applicable industry standards and regulations. Our experienced team will provide detailed recommendations and guidance on any necessary repairs or upgrades to help ensure your fall protection system is functioning at its best.

Equipment & Rentals

We offer a complete selection of fall protection equipment and systems manufactured to the highest quality standards available for purchase or with rental options. Our products safeguard workers from falls during work activities, such as working at heights, confined spaces, and hazardous environments. We understand that every industry has its unique needs and challenges when it comes to fall protection, which is why we offer a wide range of fall protection solutions that can be customized to meet the specific requirements of our clients.

Fall Protection Training

General Application

This 4-hour customized course ensures employees are competent in fall protection fundamentals. The class covers fall prevention, OSHA requirements for general and construction industries, training on properly using fall protection, aerial platforms, ladders, and falling object protection.

Competent Person

This 8-hour course teaches workers to identify fall hazards, select the most appropriate equipment, and perform inspections per OSHA standards. Upon completion, participants will be recognized as designated competent persons with the knowledge and skills necessary to excel in fall protection.

EM 385/ANSI Z359 Compliance

This 24-hour course covers all training required by the US Army Corps of Engineers Safety and Health Requirements Manual and the ANSI 359 Series of Standards for Fall Protection. Topics include fall hazards, prevention, protection management, hazard identification, the duty to have protection, rescue, ladders/stairs, falling object protection, incident investigation, and program sustainability.

A minimum of 8 and a maximum of 30 people are required to schedule a fall protection course.
